

# XPS Onsite... Review. Assist. Optimise.

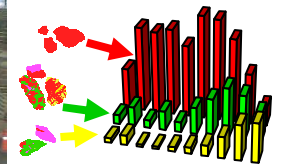

Whether you require a process review or longer term site support and operation management, XPS Process Mineralogy has a team of highly motivated, experienced and dedicated Engineers and Technicians available for your onsite, in-plant needs.

From due diligence for a potential acquisition, commissioning a new circuit, to restarting a brownfield operation or maximizing the potential of an existing one we have a range of services that can be tailored to meet your needs and budget. Outsourcing of daily metallurgical management and technical services to a quality service provider such as XPS has many advantages. We can provide you with the right personnel, at the right time to deliver the tangible results required for sustained and efficient operation.

Backed by our world class testwork facility the XPS Centre in Sudbury, our onsite personnel bring all the advantages of our tried and tested metallurgical toolbox to your operation...

"Adding value...  
...Reducing risk"

## Onsite Services:

- Process review for due diligence or opportunity identification.
- Daily metallurgical management and technical expertise - mid to long term secondment of personnel is available upon request.
- Troubleshooting and technical assistance—crushing, grinding, flotation, physical separation and dewatering.
- Onsite pilot plants, benchmarking surveys, diagnostic metallurgy via QEMSCAN and process modeling.
- Reagent selection, optimisation and formulation and analysis of plant trials.
- Developing standards, operating manuals and training of personnel.
